- <http://www.blacklightworld.com> <http://www.blacklightsuperstore.com> Why is painting an essential component of kids' Arts & Crafts curriculum?

It's The Imagination

- Ideal for encouraging and cultivating children's creativity
 - Perfect for practicing fine motor skills
 - Great for teaching kids about tertiary colors
- Provides children with varied opportunities to develop and widen their artistic skills.

Important tips: Fluorescent Paint is much different than regular paint which is why we're providing these tips. Only paint walls that are properly primed with water based primers. Even then test a very small area to be certain our fluorescent paint adheres to primer and does not peel. Never paint over oil based or shiny walls which are difficult for any paint to adhere to or absorb fresh paint. It's like painting glass or metal and peeling will occur. A small sample test area will avoid wasted time and even money so test, test, test! Never paint in areas that may be damp or have excessive humidity. Never paint outdoor projects unless you intend to use a water based protective clear over coat. Never mix with other paint or thin our paint with water or other chemicals. Sample our one ounce size for testing prior to larger gallon purchases for complete satisfaction. Paint in non refundable. Follow same instructions included with any paint order. Using these important tips will insure your complete satisfaction.

Our fluorescent paint does not contain the following common allergens: Does not contain Latex, Does not contain Dairy & Casein, Does not contain Egg, Does not contain Gluten, Does not contain Peanut & Tree Nut, Does not contain Soy.
